

CourionLive: SaaS Access Risk Management

Benefits

- Fully dedicated, secure cloud infrastructure
- Up and running in 30 days
- Easily configurable, based on best practices
- Leverage existing personnel, no specialized staff needed
- Quick time to value

In today's dynamic business environment, most organizations deal with the pain points associated with identity and access risk management – user provisioning, password and compliance management, and user access certification. While organizations want and need the benefits of a comprehensive Identity and Access Risk Management solution, what they don't want is the burden of maintaining that solution and the infrastructure to support it. Not that long ago, having your cake and eating it too wasn't a viable option. Today, things have changed and Courion has the answer – a highly secure and reliable solution that doesn't compromise data privacy or system performance and offers quick time to value.

The Courion Answer to Having (and Eating) Your Cake

CourionLive™ is Courion's answer to organizations that need a comprehensive Identity and Access Risk Management solution but are unsure where to start. Most companies know they can't get involved in a long, drawn out process that could take months or even years to get up and running, not to mention the substantial costs and additional personnel associated with going down that road.

CourionLive, Courion's Software as a Service (SaaS) version of Courion's Access Risk Management Suite is a prescriptive, best practices IAM solution that provides all the tools, processes and capabilities of Courion's Access Risk Management Suite – in the cloud! CourionLive offers a fast, easy-to-implement, highly secure and redundant solution for managing user access privileges to vital IT systems, delivering a short implementation time and quick time to value.

Quick Time to Value

Not only does CourionLive offer comprehensive IAM functionality, it also greatly reduces an organization's overhead, and its access risk management costs. CourionLive gives you the ability to automate labor intensive IAM processes prone to human error such as user provisioning, password management and user access certification, as well as dramatically reducing user access request turnaround time.

Without the cost of the physical infrastructure, physical servers, and additional personnel needed to run and monitor the system, you get all the capabilities of Courion's Access Risk Management Suite with the benefits of quick time to deployment and quick time to value. Courion will deploy the infrastructure for your environment in its cloud environment immediately, giving you instant access to the system without any additional setup or internal red tape to deal with.

Everything You Need in One Place

Comprehensive identity and user access management is a major component of security strategies for protecting sensitive information from theft or damage. Knowing who has user access rights to what resources helps organizations weigh potential security risks to vital information and remediate the problem before it causes excessive losses.

All of the capabilities of Courion's Access Risk Management Suite are gathered under one portal with a business-friendly user interface. Point-and-click functionality provides simple graphical views of access risks. Important notifications, alerts and key actions are personalized for executives, compliance and risk managers, IT operations staff and business users – so that users only see those tasks relevant to their job roles in the organization.

CourionLive gives organizations both the control and the strategic view of user access to their information systems so that they can concentrate on running their business without worrying about the tactical issues of user access control.

Up and Running in Just 30 Days

Using our proven, best-practices methodology based on hundreds of successful implementations, Courion has you up and running, 100 percent operational, in 30 days for one or all of Courion's Access Risk Management Suite solutions – password management, user provisioning or certification.

Leverage Existing Personnel – No Database or System Admins Required

With an easy-to-use, fully configured system, there's no need to hire additional personnel with specific skillsets to act as a Courion Administrator for your organization. Existing staff members can be easily taught via Web-based training – saving time and money.

Security in the Cloud

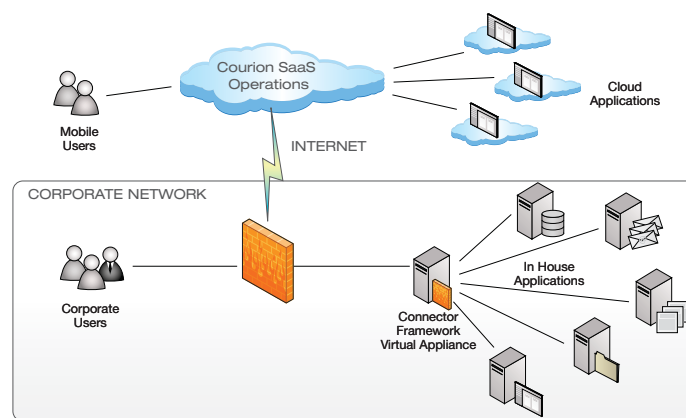

Courion's hosting environment provides a secure repository for your organization's IAM needs. The cloud infrastructure on which CourionLive is built is fully dedicated – CourionLive's infrastructure is not shared with any other companies in the cloud. Courion uses SSAE 16 audited facilities with 24x7x365 monitoring to ensure a 99.99 percent uptime. Courion's security and backup policies, as well as its hardware redundancy for its cloud infrastructure, meets or exceeds most enterprise-class IAM deployments.

Courion ensures that *only you*, as the customer, can access your data. Not only are you saving on operational costs, but you can be confident that your IAM solution is built on a rock-solid, secure infrastructure.

A Prescriptive, Easy-to-Configure Solution

CourionLive embodies Courion's long heritage of Identity and Access Management leadership. For over 15 years, Courion has been successfully implementing comprehensive IAM solutions – longer than anyone else in this market. With CourionLive, companies can now easily and rapidly deploy an effective solution based on best practices gained through hundreds of successful implementations – offering organizations a prescriptive approach for getting up and running quickly, while offering flexibility through configuration where needed.

By combining improved efficiency with the ability to identify where access risk exists in an organization, companies finally have the intelligence they need to make decisions that minimize potential risk to the business – data breaches, loss of intellectual property or damage to the company brand – that could greatly impact the bottom line.

CourionLive Architecture

About Courion

Courion Corporation is the leader in identity and access management (IAM) solutions that effectively and securely manage user access risk. More than 14 million users in 500 organizations worldwide rely on Courion's access risk management solutions to align user access privileges with corporate and regulatory governance policies.

Courion solutions enable organizations to identify, quantify, and manage access risks to vital information including intellectual property, medical records, personally identifiable information and customer data, while demonstrating regulatory compliance. Courion's cloud and on-premise solutions offer full arrays of IAM functions such as identity and access governance, user provisioning and password management, in affordable packages that deliver fast time to value and the industry's lowest total cost of ownership.
